

# Tangerine

*Femtosecond laser for research & development in micro processing and scientific applications*

## *Highest pulse energy*

Tangerine is a powerful femtosecond laser combining both high repetition rate (going up to 40 MHz and adjustable according to your needs) and high energy per pulse going up to 250  $\mu$ J.

Versatile and full-featured, Tangerine femtosecond laser is notably equipped with SuperSync Control for getting more precise synchronization with a high speed scanning system, and Short Pulse (< 150 fs pulsewidth).

This laser can also be associated with a large range of add-ons such as industrial frequency conversions down to deep UV, tunable Mango OPA platform and Non-Linear Compression to achieve pulse duration from < 100 fs down to the few cycle regime, ideally suited to generate high flux XUV radiations and attosecond pulses.

The industrial Tangerine femtosecond laser is the ideal solution for research & development in micro processing and scientific applications.

Tangerine is part of Amplitude's femtosecond lasers range, internationally recognized as reliable and stable. Their very short pulse widths lead to both the lowest heating effect on the market and the best ablation efficiency, reaching an unparalleled process quality.
